

Mikhail Kovach

Senior Full-Stack & AI Engineer

About Me

A **Senior Full-Stack & AI Engineer** with **7+ years of experience** building production SaaS platforms, distributed automation infrastructure and enterprise generative-AI systems. I specialize in taking products from architecture through implementation, deployment and ongoing optimization — across React/TypeScript front-ends, Python backends, and LLM orchestration.

Skills

Mobile / Desktop: iOS, Android, React Native, Flutter, Dart, Ionic, Electron, Java, Kotlin, Swift, C++.

Web: React, Next.js, Vue, Nuxt.js, Tailwind CSS, Shaden UI, REST APIs, Express, NestJS, Laravel, Bitrix24, Magento2, WordPress, Shopify, Django, Flask, Spring Boot, AWS, Firebase, Supabase, n8n, NoSQL, PostgreSQL, Redis, Docker, Cloudflare, Nginx.

FinTech: Web3, DeFi, Fireblocks, TradingView, Custody, EVM.

Artificial Intelligence: BitTensor, Subnets, PyTorch, Keras, TensorFlow, Yolo, LLM, Hugging Face, RASA, ChatBot, FastAPI, gRPC, RAG, pgvector.

Tools: VS Code, Claude AI, Android Studio, XCode, Visual Studio, Git, Postman, Google Chrome, Figma, Adobe Photoshop, Sketch, Slack, WhatsApp, Telegram.

Education

- Bachelor of Computer Science, University of Sydney
Graduated 2020

Professional Certificates

- Software Engineer — HackerRank
hackerrank.com/certificates/ebf24d2faecd
- Frontend Developer (React) — HackerRank
hackerrank.com/certificates/887fe940dd1b
- Python (Basic) — HackerRank
hackerrank.com/certificates/d2c90b92066b

Experiences

Senior Full-Stack & AI Engineer

Feb 2024 – Jul 2026

Dataiku — Remote

Built **Dataiku Answers**, the enterprise **RAG** assistant — ingestion and embedding pipelines, vector retrieval over **Pinecone**, prompt construction and grounded generation, with per-user access control applied to every answer. Extended **LLM Mesh**, the multi-provider LLM gateway, to route a single API across **OpenAI**, **Anthropic**, **AWS Bedrock**, **Azure**, **Google Vertex**, **Databricks**, **Mistral** and **NVIDIA**, with token streaming, function calling and multimodal support. Delivered the tool-using **GenAI agent framework** — dynamic tool calling, corrective RAG, Python-defined logic and reusable plugins — plus the **LLM Registry** for model qualification, versioning, cost control and audit. Built **React/TypeScript** interfaces for agent authoring and conversation review, and established the evaluation and observability that turned model quality into a measurable release gate.

Software Engineer — Platform & Automation

Nov 2022 – Oct 2023

Zapier — Remote

Worked on the core **Zap workflow execution engine** across **9,000+ integrations** — event and trigger processing, asynchronous job queues, idempotent retries, rate-limit management and fault tolerance under sustained load. Extended the **Zap Editor's Drafts** and versioning model, which lets users edit a workflow without disabling the running production version, through immutable revisions, concurrent editing, schema validation and **publish/rollback**. Delivered the 2023 enterprise control plane (**Version Rollback**, **Audit Logs**, **RBAC**, **Super Admin**) for customers running mission-critical automations, and contributed to the **AI Zap Builder**, translating natural language into validated workflow schemas.

Backend Engineer — Accounting Platform

Oct 2021 – Sept 2022

Patriot Software — Remote

Built the backend services behind core **accounting transactions** — the **Chart of Accounts** and its subaccount hierarchy, transaction import and account mapping, vendor and customer data processing, and **general-ledger** and **trial-balance** functionality. Designed and delivered the **accounting migration and import system** used to onboard customers from their existing books: **CSV ingestion**, account mapping, **data validation**, and bulk import of customers, vendors, contractors and trial balances, wired into **automated onboarding workflows**.

Backend Developer & Management

Sept 2020 – Oct 2021

StakOne Pty Ltd — Canberra, Australia

Developed and maintained scalable **backend services** and **REST APIs**, designing and optimizing **database structures**, queries and data workflows, and implementing **authentication**, **authorization**, validation and core business logic. Integrated **third-party services** and **external APIs**, troubleshooted production issues and drove measurable improvements to **system reliability**. Alongside delivery, carried **management responsibilities** — reviewing code, coordinating development tasks across the team, planning and prioritizing technical work, and communicating project requirements. Supported software releases end to end through **testing**, **deployment** and **ongoing maintenance**, working with management and stakeholders to translate **business requirements into technical solutions**.

Freelance Software Engineer

Mar 2020 – Sept 2020

Independent — Freelancer.com

Delivered end-to-end web applications and backend services for international clients, owning each engagement solo from requirements and **database schema** through build, **deployment**, handover and production monitoring.
